

L^AT_EX Support For T-26 Divine Font

Boris Veytsman*

2013/03/07, v1.0

Abstract

This package provides L^AT_EX support for T-26 Divine Font. It has everything you need to typeset in this font - except the fonts themselves.

1 Introduction

While such engines as `xetex` and `luatex` can use native system fonts, the installation base of `pdftex` is large enough to justify its continuing support with new fonts.

This package provides support files for the Divine Font Family from T-26. According to the Fontname scheme [1], this corresponds to the family `lsb`. We provide the necessary font files—everything but the fonts.

Divine is a calligraphic font designed by Frank Heine and Marilyn Devedjiev in 1995 (<http://www.t26.com/fonts/207-Divine>) and distributed by T-26 foundry.

2 Installation

First, you need to purchase the font itself: the `pfb` files are *not* included in the package. You need just one file `divine.pfb`. If your \TeX system is TDS-compliant, install the file into `$TEXMF/fonts/type1/t26/divine`. Download <http://ctan.tug.org/install/fonts/psfonts/divine.tds.zip> and unzip this file in `$TEXMF`. Add `+fdv.map` to the configuration files of `dvips`, `pdftex` and your dvi previewer. Run `updmap` and `texhash` programs to update the configuration files and file names database.

The style `divine.sty` provides a number of commands for using the font family (see Section 3)

3 Using \LaTeX Style

To use the package, add to the preamble of your document the usual incantation `\usepackage[options]{divine}`.

The options `scaled=...` scales divine fonts to the given scale.

The font can be selected in the usual way:

```
\fontfamily{fdv}\selectfont
```

```
\divinefamily      Alternatively you can use a declaration \divinefamily and a command  
\textdivine       \textdivine to set the family.
```

4 Implementation

4.1 Identification

We start with the declaration who we are. Most `.dtx` files put driver code in a separate driver file `.drv`. We roll this code into the main file, and use the pseudo-guard `<gobble>` for it.

```
1 (style)\NeedsTeXFormat{LaTeX2e}
2 <*gobble>
3 \ProvidesFile{divine.dtx}
4 </gobble>
5 (style)\ProvidesClass{divine}
6 (fdv-drv)\ProvidesFile{fdv-drv.tex}
7 (fdv-map)\ProvidesFile{fdv-map.tex}
8 [2013/03/07 v1.0 Using T26 Divine Font in LaTeX]
```

And the driver code:

```
9 <*gobble>
10 \documentclass{ltxdoc}
11 \usepackage{booktabs}
12 \usepackage{url}
13 \usepackage[tableposition=top]{caption}
14 \usepackage{hypdoc}
15 \PageIndex
16 \CodelineIndex
17 \RecordChanges
18 \EnableCrossrefs
19 \begin{document}
20   \DocInput{divine.dtx}
21 \end{document}
22 </gobble>
```

4.2 Fontinst Driver

This follows [2].

First, the preamble

```
23 <*fdv-drv>
24 \input fontinst.sty
25 \substitutesilent{bx}{b}
```

Starting recording transforms:

```
26 \recordtransforms{fdv-rec.tex}
```

A bunch of fonts:

```
27 \transformfont{fdvr8r}{\reencodefont{8r}{\fromafm{divine}}}
```

There is no hook in `fontinst.sty` for writing our own preamble to `.fd` file. However, we need to add scaling commands to the preamble. OK, we will patch `fontinst`:

```
28 \fontinstcc
```

```

29 \def\fd_family#1#2#3{
30   \a_toks{#3}
31   \edef\lowercase_file{\lowercase{
32     \edef\noexpand\lowercase_file{#1#2.fd}}}
33   \lowercase_file
34   \open_out{\lowercase_file}
35   \out_line{\percent_char~Filename:~\lowercase_file}
36   \out_line{\percent_char~Created~by:~tex~\jobname}
37   \out_line{\percent_char~Created~using~fontinst~v\fontinstversion}
38   \out_line{}
39   \out_line{\percent_char~THIS~FILE~SHOULD~BE~PUT~IN~A~TEX~INPUTS~
40     DIRECTORY}
41   \out_line{}
42   \out_line{\string\ProvidesFile{\lowercase_file}}
43   \out_lline{[
44     \the\year/
45     \ifnum10>\month0\fi\the\month/
46     \ifnum10>\day0\fi\the\day\space
47     Fontinst~v\fontinstversion\space
48     font~definitions~for~#1/#2.
49   ]}
50   \out_line{}

```

Here is our patch:

```

51   \out_line{\string\expandafter\string\ifx\string\csname\space
52     FDV@scale\string\endcsname\string\relax}
53   \out_line{\space\string\let\string\FDV@@scale\string\@empty}
54   \out_line{\string\else}
55   \out_line{\space\string\edef\string\FDV@@scale\left_brace_char
56     s*[\string\csname\space FDV@scale\string\endcsname]
57     \right_brace_char\percent_char}
58   \out_line{\string\fi\percent_char}
59   \out_line{}

```

End of the patch.

```

60   \out_line{\string\DeclareFontFamily{#1}{#2}{\the\a_toks}}
61   {
62     \csname #1-#2\endcsname
63     \out_line{}
64     \let\do_shape=\substitute_shape
65     \csname #1-#2\endcsname
66     \let\do_shape=\remove_shape
67     \csname #1-#2\endcsname
68   }
69   \x_cs\g_let{#1-#2}\x_relax
70   \out_line{}
71   \out_line{\string\endinput}
72   \close_out{Font~definitions}
73 }
74 \normalcc

```

Now we install the fonts. First T1

```
75 \installfonts
76 \installfamily{T1}{fdv}{}
77 \installfont{fdvr8t}{fdvr8r,newlatin}{t1}{T1}{fdv}{m}{n}{
78 <->\string\FDV@scale}
79 \endinstallfonts
```

Then TS1

```
80 \installfonts
81 \installfamily{TS1}{fdv}{}
82 \installfont{fdvr8c}{fdvr8r,textcomp}{ts1}{TS1}{fdv}{m}{n}{
83 <->\string\FDV@scale}
84 \endinstallfonts
```

And OT1

```
85 \installfonts
86 \installfamily{OT1}{fdv}{}
87 \installfont{fdvr7t}{fdvr8r,newlatin}{ot1}{OT1}{fdv}{m}{n}{
88 <->\string\FDV@scale}
89 \endinstallfonts
```

And the end:

```
90 \endrecordtransforms
91 \bye
92 </fdv-drv>
```

4.3 Fontmap Generation

This is a standard procedure [2]

```
93 <*fdv-map>
94 \input finstmsc.sty
95 \resetstr{PSfontsuffix}{.pfb}
96 \adddriver{dvips}{fdv.map}
97 \input fdv-rec.tex
98 \donedrivers
99 \bye
100 </fdv-map>
```

4.4 Style File

The scaling code is from the `helvet` package:

```
101 <*style>
102 \newif\ifFDV@default
103 \FDV@defaultfalse
104 \RequirePackage{keyval}
105 \define@key{FDV}{scaled}[1.00]{%
106 \def\FDV@scale{#1}}
107 \def\ProcessOptionsWithKV#1{%
108 \let\@tempc\relax
109 \let\FDV@tempa\@empty
```

```

110 \ifx\@classoptionslist\relax\else
111   \@for\CurrentOption:=\@classoptionslist\do{%
112     \ifundefined{KV@#1@\CurrentOption}%
113       {}%
114       {%
115         \edef\FDV@tempa{\FDV@tempa,\CurrentOption,}%
116         \@expandtwoargs\@removeelement\CurrentOption
117           \@unusedoptionlist\@unusedoptionlist
118       }%
119     }%
120 \fi
121 \edef\FDV@tempa{%
122   \noexpand\setkeys{#1}{%
123     \FDV@tempa\@optionlist{\@currname.\@current}}%
124   }%
125 }%
126 \FDV@tempa
127 \let\CurrentOption\@empty
128 }
129 \ProcessOptionsWithKV{FDV}
130 \AtEndOfPackage{%
131   \let\@unprocessedoptions\relax
132 }

```

Some new commands:

```

133 \DeclareRobustCommand\divinefamily{\fontfamily{fdv}\selectfont}
134 \DeclareTextFontCommand{\textdivine}{\divinefamily}
135 </style>

```
